

Il teorema di Pitagora

terne pitagoriche

angoli retti

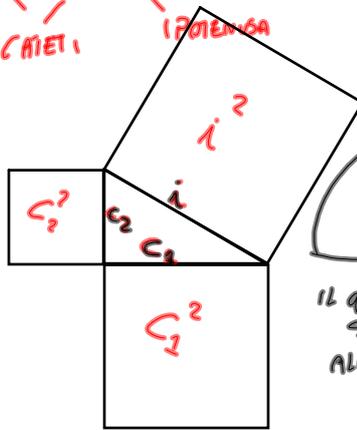

(3, 4, 5) (5, 12, 13) (7, 24, 25) (8, 15, 17)
 (9, 40, 41) (11, 60, 61) (12, 35, 37) (13, 84, 85)
 (16, 63, 65) (20, 21, 29) (28, 45, 53) (33, 56, 65)
 (36, 77, 85) (39, 80, 89) (48, 55, 73) (65, 72, 97)

numeramente

$$3^2 + 4^2 = 5^2$$

$$a^2 + b^2 = c^2 \Rightarrow \text{TRIANGOLO RETTO}$$

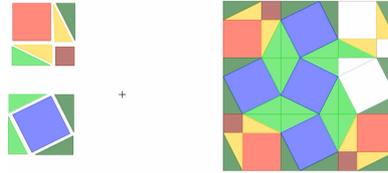

CATETI IPOTENUSA

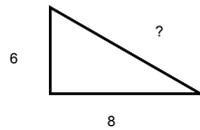

$$i^2 = c_1^2 + c_2^2$$

IL QUADRATO COSTRUITO SULL'IPOTENUSA E' PARIGLIO ALLA SOMMA DEI QUADRATI COSTRUITI SUI CATETI

geometricamente

la formula da ricordare

$$i^2 = c_1^2 + c_2^2$$

$$i^2 = 6^2 + 8^2 = 36 + 64$$

$$i^2 = 100 \Rightarrow i = \sqrt{100} = 10$$

$$i = \sqrt{c_1^2 + c_2^2}$$

$$i = \sqrt{6^2 + 8^2} = \sqrt{100} = 10$$

per casa....

Disegnare i triangoli e risolvere i problemi.
